

WILLIAM NASONI

Senior Full Stack Engineer | Client-Embedded Delivery | Next.js · Angular · Node.js · Spring Boot · AWS

william5nasoni@gmail.com | +44 7346 746758 | Manchester, UK | [linkedin.com/in/william-nasoni](https://www.linkedin.com/in/william-nasoni) | github.com/thamzy265

PROFESSIONAL SUMMARY

Full stack engineer with 7 years embedded with clients through a consultancy, delivering 10+ production systems across 6 countries for government ministries, the World Bank, Corus International and international NGOs. Owns the whole arc of a customer engagement: discovery and requirements workshops with non-technical stakeholders, system design, build, deployment, user-acceptance testing, training and handover so clients run the system without ongoing developer support. Has joined projects mid-stream and taken them to completion. Specialises in turning field-collected data into dashboards and reports decision-makers act on, across Next.js/React, Angular, Node.js, Java/Spring Boot, Flutter and AWS.

CORE STRENGTHS

Customer & Delivery: Requirements discovery and stakeholder workshops, translating business problems into technical designs, prototyping and demos, UAT leadership, training and enablement, SOPs and documentation, production support, mentoring client and partner developers

Front-End: Next.js, React, Angular, Vue.js, TypeScript, JavaScript, Tailwind, Bootstrap, responsive UI/UX

Back-End & APIs: Node.js, Java/Spring Boot, PHP/Laravel, C#/ASP.NET, Python (data processing), RESTful API design, GraphQL, third-party system integration

Cloud, DevOps & Data: AWS (S3, Lambda, ECS, RDS), Docker, GitHub Actions CI/CD, Linux administration; PostgreSQL, MySQL, MSSQL, MongoDB; data modelling, ETL, real-time dashboards and automated reporting

Mobile & Testing: Flutter/Dart, Android (Java, Kotlin), offline-first sync; Jest, automated tests in CI, peer code review, Agile/Scrum

WORK EXPERIENCE

Full Stack Developer / IT Associate (Contract) — CGA Technologies UK

2020 – Present

Remote | Consultancy delivering data, web and mobile systems for government, education and NGO clients

- Senior engineer on 9+ client engagements, typically the primary technical contact for the client: ran requirements workshops with ministry officials and programme staff, presented prototypes, and translated what clients asked for into what they actually needed — see Key Projects.
- Handed over every delivered system to the client's own team: led UAT, wrote SOPs and documentation, trained government officers and partner staff, and mentored partner developers so systems kept running without CGA.
- Joined projects part-way through, stabilised them and shipped: re-established requirements with the client, documented undocumented systems and delivered outstanding modules to production.
- Owned delivery infrastructure end to end: GitHub Actions CI/CD replacing manual releases, Docker containerisation, AWS deployment (ECS, RDS, S3, Lambda) and Linux hosting, DNS and production support.
- Worked in a fully peer-reviewed culture where every change is reviewed and tested by another developer; contributed to team QA standards.

Full Stack Developer (Contract) — MarketSA

2024 – Jul 2026

South Africa (Remote) | Angular, TypeScript, Node.js, MSSQL, Docker

- Call centre ran each campaign as its own Microsoft Access executable installed on every agent's PC. IT updated machines one at a time and PCs drifted, so agents on the same campaign worked on different versions of the application. Moved it to a browser-based Angular/Node.js system over MSSQL — one deployment, every agent on the same version, and no per-machine Windows or Access dependency.
- Built a configurable forms-and-calculations engine so non-technical teams set up campaign logic themselves, cutting new-campaign launch time from 3–5 days to hours and reducing developer involvement per campaign by ~90%; added call-QA, audit and agent-scorecard dashboards for managers.
- Worked directly with managers throughout, explaining technical trade-offs at the right level for each audience and delivering incrementally against their priorities.

Software Developer (Full-time) — Computer Accountant, Malawi

2019 – 2020

- Built accounting software features for SME clients, including a payments approval workflow integrated with Sage 50 so approved payments flowed into accounting without manual re-entry.

Full Stack Web Developer (Full-time) — Trinitatis Tech, Malawi **2018 – 2019**

- Developed backend APIs and frontends across concurrent client projects, contributing to database design, server configuration and deployment.

KEY PROJECTS

Public project pages: cgatechnologies.org.uk/projects

Perivoli Early Childhood Development Data System — Lead Developer **2020 – 2025**

Client: Perivoli Schools Trust (Malawi, Namibia, Zambia) | Node.js, Vue.js, Android, AWS (ECS, RDS, S3, Lambda)

- Brief was to digitise paper forms; the underlying need was for head office to see training activity across three countries as it happened. Led the build of an offline-first tablet capture app, Node.js APIs and a database publishing results to the Trust's website in real time; 5,000+ historic paper records digitised into the system.
- Built the forms as configurable templates so partner staff could change them without a developer; led UAT, trained and mentored partner teams, wrote the SOPs, and iterated new modules from their feedback.

Teacher Management Information System (TMIS) — Full Stack Developer **2023 – 2024**

Client: Teaching Service Commission, Sierra Leone (World Bank-funded) | Vue.js, Laravel, GraphQL, MySQL, Docker

- National platform replacing paper workflows for 36,000+ payroll teachers, live since January 2024 with 23,000+ teachers registered and 3,700 recruited through it. Developed the teacher licensing module to the Commission's specification, integrated multiple government data sources into dashboards, and automated ministry reports.

Wi De Ya — One Tablet Per School — Mobile & Full Stack Developer **2022 – 2023**

Client: Teaching Service Commission, Sierra Leone (World Bank-funded) | Android, SQL, MIS dashboards

- Developed the offline-capable app school leaders in 300 primary schools use to record daily teacher and pupil attendance, and the MIS dashboard and reports consolidating data across schools and regions — the Ministry's first national view of attendance.

Social Cash Transfer Programme MIS — Full Stack Developer **2020 – 2023**

Client: Ministry of Gender, Malawi (KfW/EU-funded) | Java, Spring Boot, MySQL, REST

- Built the organisation and participant modules of a Spring Boot/MySQL MIS supporting a national cash-transfer programme reaching 300,000+ households.

Education Sector Improvement Project — Technical Lead **2021**

Client: Ministry of Education, Malawi (World Bank/GPE-funded) | PHP, JavaScript, MySQL

- Directed delivery of a real-time monitoring app and dashboard covering 1,200 primary schools and the Ministry's Community Dialogue Platform (two-way SMS and voice for 150 school communities); trained ministry officers to run both without developer support.

Corus 3D Platform — Flutter Rebuild — Mobile Developer (Lead) **Oct 2024 – Present**

Client: Corus International | Flutter, Dart, Jest, GitHub Actions

- Led the rebuild of a Java/Android data-capture platform in Flutter, consolidating 2 codebases into 1 and adding iOS at full feature parity; set up GitHub Actions CI with automated Jest test suites.

MERL Data-Capture Platforms (2 builds) — Android Developer **2021 – 2022**

Clients: Corus International (global), Education Development Trust (Ethiopia, FCDO-funded) | Java, Android

- Built two offline-first data-collection platforms with dynamic form schemas for monitoring & evaluation programmes, in a 4-developer, fully peer-reviewed team.

PROSPER Monitoring & Reporting MIS — Developer **2021**

Client: Concern Worldwide, Malawi | Web MIS, data capture

- Built the data-capture system through which five INGO and four UN partners submit field data for a resilience programme covering 1.2 million people.

EDUCATION

Malawi Digital Empowerment Program (MDEP) — New Horizon TechnoBrain **2018**

Diploma in Information Communication Technology — New Horizon TechnoBrain **2015**

MSCE — Malawi School Certificate of Education — Chinsapo Secondary School **2014**
